

AMC ENGINEERING COLLEGE
DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Capacity Planning for IT

Sub Code:BCS456B

MODULE-5

Question 1:

What is a primary advantage of server virtualization?

- A. Direct hardware control
- B. Increased physical server count
- C. Efficient resource utilization
- D. Simplified network configurations

Answer: C. Efficient resource utilization

Question 2:

What is a key benefit of migrating guest OS instances in virtualization?

- A. Improved network performance
- B. Enhanced application compatibility
- C. Fault tolerance and hardware failure resilience
- D. Reduced power consumption

Answer: C. Fault tolerance and hardware failure resilience

Question 3:

Why are containers considered efficient compared to virtual machines (VMs)?

- A. They utilize a hypervisor for resource management
- B. They require less disk space for installation
- C. They share the host OS kernel for running applications

D. They provide stronger isolation between applications

Answer: C. They share the host OS kernel for running applications

Question 4:

What is a potential disadvantage of virtualization in terms of capacity planning?

A. Complicated metric collection

B. Inability to migrate VMs

C. Reduced network performance

D. Increased power consumption

Answer: A. Complicated metric collection

Question 5:

How do containers differ from VMs in terms of resource consumption?

A. Containers require more memory than VMs

B. VMs share the host OS kernel, while containers do not

C. VMs are more portable across different host environments

D. Containers run processes directly on the host OS without a hypervisor

Answer: D. Containers run processes directly on the host OS without a hypervisor

Question 6:

What challenge is specifically addressed by using dedicated instances in cloud computing?

A. Security concerns

B. Performance isolation

C. Cost management

D. Container scalability

Answer: B. Performance isolation

Question 7:

What factor contributes to performance variation among instances in cloud environments?

- A. Limited network topology
- B. Uniform hardware configuration
- C. Resource contention across customers
- D. Reduced instance diversity

Answer: C. Resource contention across customers

Question 8:

What distinguishes containers from VMs in terms of application portability?

- A. VMs are more portable across different hypervisors
- B. Containers provide stronger isolation between applications
- C. VMs share the host OS kernel for running applications
- D. Containers are less dependent on underlying hardware

Answer: D. Containers are less dependent on underlying hardware

9. Which of the following is a type of cloud computing service?

- a) Service-as-a-Software (SaaS)
- b) Software-and-a-Server (SaaS)
- c) Software-as-a-Service (SaaS)
- d) Software-as-a-Server (SaaS)

Answer c

In cloud computing, the client is on which end.

- 1) Backend
- 2) Frontend
- 3) Depends
- 4) Both A and B

Ans:2

On what is cloud computing-based.

- 1) Modulation
- 2) Hybridization
- 3) Virtualization
- 4) Multiplexing

Ans: 3

State whether true or false: Is google docs a type of cloud computing?.

- 1) True
- 2) False

Ans: 1

Choose the most important use of cloud computing.

- 1) Data Privacy
- 2) Data Storage
- 3) Cost Effective
- 4) Security

Which of the following is NOT among the building blocks of the best practices every successful cloud-computing platform should follow?

- 1) World-class security
- 2) Complete disaster recovery
- 3) High availability
- 4) Resource Utilization

Ans: 4

In a ____ cloud computing environment the organization itself provides and manages some resources locally, and the remaining other resources provided externally

- 1) public
- 2) hybrid
- 3) private
- 4) All of the Above

Ans: 2

SLA stands for:

- 1) Standard Level Assignments
- 2) Service Level Agreements
- 3) Standard Level Agreements
- 4) Service Level Assignments

Ans: 2

Which of the following is identified as cloud?

- 1) Web Applications
- 2) Hadoop
- 3) Intranet
- 4) All of the mentioned.

Ans:2

Point out the correct statement:

- 1) The use of the word "cloud" makes reference to the two essential concepts
- 2) Cloud computing abstracts systems by pooling and sharing resources
- 3) cloud computing is nothing more than the Internet
- 4) All of the mentioned

Ans: 2

Which of the following is best known service model?

- 1) SaaS
- 2) PaaS
- 3) IaaS
- 4) All of the above

Ans: 4

You can't count on a cloud provider maintaining your _____ in the face of government actions

- 1) Scalability
- 2) Reliability
- 3) Privacy
- 4) None of the mentioned

Ans: 3

When you add a software stack, such as an operating system and applications to the service, the model shifts to _____ model

- 1) SaaS
- 2) PaaS
- 3) IaaS
- 4) All of the above

Ans: 1

Which of the following is used to evaluate your own cloud application's network performance?

- 1) Path Cloud
- 2) PathView Cloud
- 3) View Cloud
- 4) All of the mentioned

Ans: 2

Which of the following provider rely on the virtual machine technology to deliver servers?

- 1) CaaS
- 2) AaaS
- 3) PaaS
- 4) IaaS

Ans: 4

Which of the following is essential concept related to Cloud?

- 1) Reliability
- 2) Productivity
- 3) Abstraction
- 4) All of the mentioned

Ans: 3

Which of the following is Cloud Platform by Amazon?

- 1) Azure
- 2) AWS
- 3) Cloudera
- 4) All of the mentioned

Ans: 2

Which of the following is one of the unique attributes of Cloud Computing?

- 1) utility type of delivery
- 2) elasticity
- 3) low barrier to entry
- 4) all of the mentioned

answer 4

VTUSYNC.IN
